Data Validation (DV) Web State Release 4.2.4
RELEASE NOTES

Release Date: February 2012

SUMMARY

DV Web State Software 4.2.4 has been installed on your system. The following items were fixed in this release:

- The report validation scores for Tax Population 4 were fixed in the application to display the correct scores in the View Population Scores window. The scores are displayed correctly in the View Population Scores and the View Report Validation screens.
- For all Tax populations, the Report Validation screen was changed to display a new status bar with the final Report Validation Status.
- The incorrect validation count of zero for multi-claimant appeals for Benefits Populations 6, 7, 8 and 9 was corrected to display the actual validation counts.
- The data import functionality in the "Benefits Selection Criteria" screen has been fixed so that it does not save the date ranges on the Report Validation screen when the "Cancel Import" is clicked.
- The application was corrected to ensure the correct scores and validation counts in the Report Validation screen for Benefits Populations 13 and 14, and Tax Population 4 are transferred to the National Office.
- OMB Burden statement was updated to display the correct expiration date of 7/31/2014.
- The text for un-validated cases on the sample worksheets was changed from "Not Validated" to "Not Yet Validated."
- The WBA field (Field 10) in Benefits Population 1 was changed to optional for Agent State weeks claimed, subpops 1.7-1.9.
- In the Benefits Selection Criteria screen, the Import Data functionality now contains only one screen where the user can enter the extract file name, the Period Start date and the Period End date; and then hit the Import button to load the extract file into the DV software. The same applies for the Tax application.
- A new algorithm is used for random samples on the View Samples window when the universe size is less than the sample size.
  - If the Universe size is equal or greater than 100 for a sample of size 100, then the sample will be divided into two tiers: Tier 1 contains 30 samples and Tier 2 contains 70 samples. If the score in Tier 1 is inconclusive then the Tier 2 will be displayed to calculate the overall score.
  - But if the Universe size is less than 100 for a sample size of 100 then all the records in the universe will be displayed in one screen. The user needs to validate all the records and the score will be calculated based on the universe size.

  The same applies for Universe size less than sample size for a sample of size 200.

1. Features

Feature Type	Release	Description	Path
Tax Population 4, the report validation scores	4.2.4	For Tax Population 4, the report validation scores are now properly calculated by the software.	N/A
Report Validation screen for all Tax populations	4.2.4	In the Report Validation screen for all Tax populations, a new status bar was created to display final Report Validation Status.	N/A
Validation counts for multi claimant appeals for Benefits Population of 6, 7, 8 and 9	4.2.4	The incorrect validation count of zero for multi-claimant appeals for Benefits Population of 6, 7, 8 and 9 was fixed in the system. The actual validation counts will be displayed.	N/A
Data import functionality in Benefits Selection Criteria section	4.2.4	The data import functionality in the "Benefits Selection Criteria" section has been fixed so that it doesn't save the date ranges on the Report Validation screen when the "Cancel Import" is clicked.	N/A
Scores and validation counts in Report Validation screen	4.2.4	The system was fixed to transfer the correct scores and validation counts in Report validation screen for Benefits Populations 13 and 14 and Tax Population 4 to the National Office.	N/A
OMB Burden statement at bottom of Login screen	4.2.4	OMB Burden statement at the bottom of the Login screen was updated to display the correct expiration date of 7/31/2014	N/A
Cases on sample worksheets	4.2.4	The text for un-validated cases on sample worksheets was changed from "Not Validated" to "Not Yet Validated"	N/A

WBA field (Field 10) in Benefits Pop 1	4.2.4	WBA field, (Field 10), in Benefits Population 1 was changed to optional for Agent State weeks claimed, subpops 1.7-1.9	N/A
Benefits Selection Criteria section	4.2.4	In the Benefits Selection Criteria section, Import Data functionality now contains only one screen where the user can enter the extract file name, the Period Start date and the Period End date; and then hit the Import button to load the extract file into the DV software. The same applies for Tax application.	N/A
Benefits Selection Criteria	4.2.4	A new algorithm was implemented to determine the score of random samples when the universe size is smaller than the sample size The new algorithm also corrected the issue when the samples size was 29 for the 30/100 samples in the View Samples screen	N/A

2. Known Issues
None

3. Installation and Setup
The software has been installed on your state system.

4. Menu Access
No changes on the "Applications" link.

5. Documentation
N/A

6. Troubleshooting Information
N/A
